RESEARCH SUMMARY

I study how blind and low-vision (BLV) people interact with generative AI, combining human-computer interaction methods with technical prototyping to understand where these systems build trust and where they introduce new privacy and accessibility risks. My work pairs qualitative research like interviews and user studies with BLV participants with the design and evaluation of AI-based assistive prototypes, grounding findings in both lived experience and system behavior.

EDUCATION

Ph.D. in Computer Science

University of Texas at San Antonio, Texas, USA
Advisor: [Dr. Taslima Akter](#) | [APEX Lab](#)

Aug 2024 – Present

B.Sc. (Engg.) in Computer Science and Engineering

Bangladesh University of Engineering and Technology (BUET), Dhaka, Bangladesh
Thesis: *Malicious Code Detection and Analysis*, advised by Dr. Muhammad Masroor Ali

Feb 2016 – Mar 2021

RESEARCH EXPERIENCE

Graduate Research Assistant II

University of Texas at San Antonio, Texas, USA

Jan 2026 – Present

- Lead research on accessible, trustworthy, and privacy-aware generative AI for blind and low-vision (BLV) users.
- Design and conduct user studies with BLV participants; build research prototypes to evaluate accessible AI interactions, from study design and interviews through qualitative analysis and publication.
- Mentor undergraduate students on research methods and academic writing.

Fake Bengali Facebook Post Detection on COVID-19

Research Project

2022

- Built a benchmark dataset of Bengali-language Facebook posts on COVID-19, collected via CrowdTangle.
- Trained transformer-based models on the dataset and reported on the correlation between misinformation and audience engagement, one of the first empirical studies of Bengali-language misinformation during the pandemic.

Malicious Code Detection and Analysis

B.Sc. Thesis

2020 – 2021

- Extended CodeOntology to express the semantic structure of Java source code as an ontology, encoding characteristic malware signatures (e.g., repeated connection calls underlying a DDoS attack).
- Identified a known malware from source code alone and produced human-interpretable explanations for flagged code; the approach remained robust against obfuscation techniques that scatter malicious calls across intermediate methods.

Performance Analysis of Highly Dense Terahertz Communication Networks

Research Project

2019

- Simulated 5G and beyond-5G network communication using NS-3.
- Analyzed throughput and scaling behavior of highly dense terahertz communication networks.

TEACHING EXPERIENCE

Graduate Teaching Assistant

Aug 2024 – Dec 2025

University of Texas at San Antonio, Texas, USA

- Teaching assistant for undergraduate Operating Systems and Systems Programming.
- Graded assignments, projects, and exams; supported students through office hours on OS concepts and low-level C programming.

INDUSTRY EXPERIENCE

Software Engineer II, Kona Software Lab Limited

Jan 2023 – Jul 2024

Integrated Platform Team, Dhaka, Bangladesh

- Worked in the Integrated Platform team building global payment solutions.
- Designed and implemented validation and authorization for financial transactions, including recharge and payment flows.
- *Tech Stack: Spring Boot, Redis, RabbitMQ, MariaDB*

Graduate Engineer, Kona Software Lab Limited

Aug 2021 – Dec 2022

Digital Financial System Team, Dhaka, Bangladesh

- Full-stack developer on the Digital Financial System team, delivering financial transaction solutions for Nagad, Bangladesh’s fastest-growing mobile financial system, including tokenized payments, KYC, and bank/card transfers.
- Helped stand up the back-office portal for the KONAPLATE project using Angular.
- *Tech Stack: Spring Boot, Angular, Redis, RabbitMQ, Strapi, Oracle*
